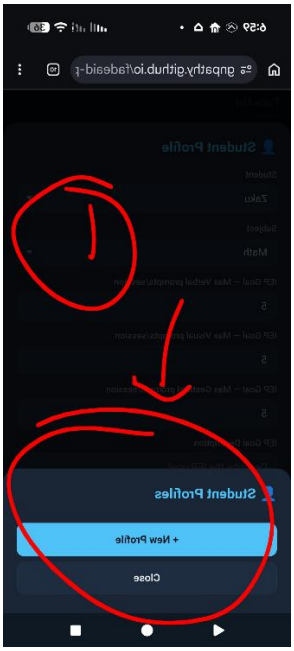
Now, I tested it on my phone with wiping all the data - we still have problems - most of it arent fixed

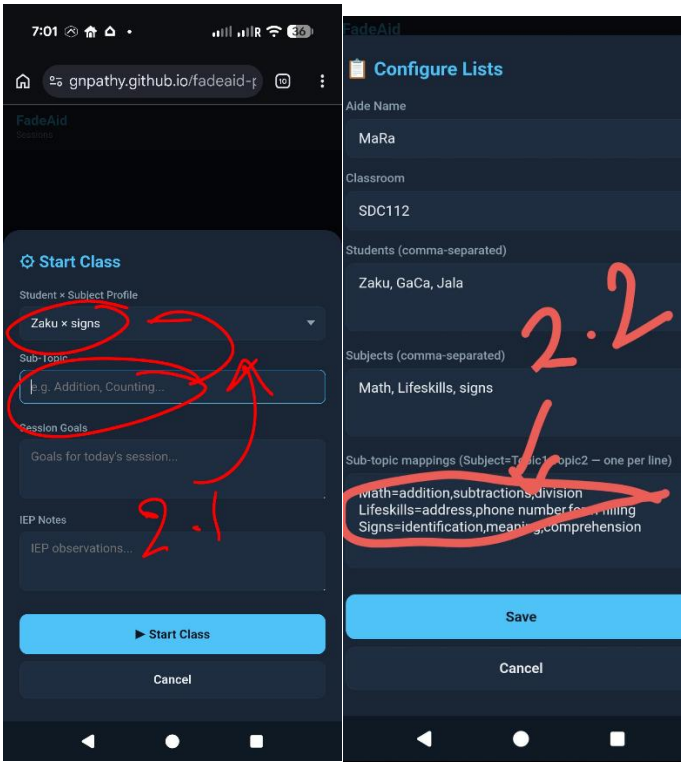
1) Screenshot 1 - When we press new profile, it opens up the new screen; but the bottom pop-up screen doesn't go away after I click "+New Profile". I need to explicitly press close - which is counter intuitive



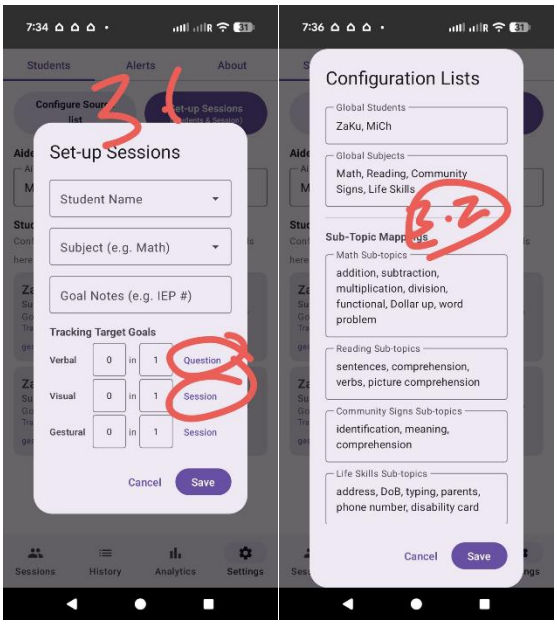
2) screenshot 2.2 and 2.1

In 2.2 I've already set-up sub-topics for three subject - Math, Lifeskills and Signs

in 2.1 you see, when I choose Lifeskills as the subject, it doesn't show the sub-topics options. It does when I choose Math though



3) 3.1 and 3.2 JPG - are screenshot from Fadeaide Android APP - for your reference on how the questions and session were and how the subjects > sub-topics worked. See this in relation to Question 2.

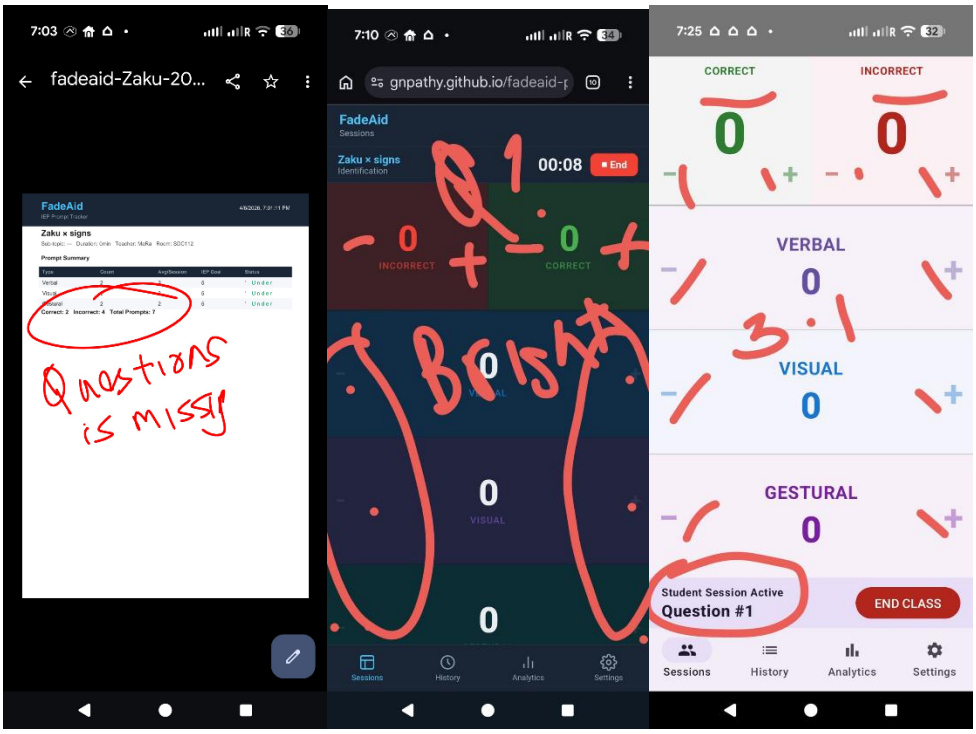


4) Screenshot #4.0 (reports), #4.1 (app) and 4.2(pwa) in the list - In the report, the attribute "questions" itself is missing. If you recall, every session (of a subject) has a question. and number of questions form a session. We have several problem

a) You are missing the construct of question from the design when you migrated to PWA

b) the IEP goal could either be (for example) 4 Prompts / session or 1 prompt / question - so when we set up the prompt goal, we had the choice for teacher to choose - if they want the goal to be per session or per question. That is totally missing from this design itself. It should start with goal and exist in the design of session.

c) If you recall, in the Android app, a "Correct" / Incorrect"; and when someone pressed Correct/Incorrect, the variable question was incremented. That is missing.

Also there was a "+" & "-" to the correct and incorrect that the teachers can incrment and decrement (and the data variable questions acts accordingly)


I've attached the screen shot of PWA app (middle screenshot) and the Android App (right screenshot) for reference.
